

# Beauty meets Brawny

## Alaskan Yellow Cedar shingles with bleaching oil

These shingles are an architectural dream. Milled for sidewalls and gable ends, they **weather to a perfect gray** and can withstand the toughest environments.

These shingles were high-graded at the mill, so you'll get more **wide, extra clear** shingles for greater beauty and faster installation. R&R (rebutted and re-squared) milling delivers even edges, keyways and butts, making installation even easier.

Our Alaskan Yellow cedar is gently treated with Cabot bleaching oil, which ensures that your project will weather evenly in any environment. These shingles are Bureau Certified and far exceed requirements for bureau certification.

## #1 Sanded R&R 18" Alaskan Yellow Cedar shingles with bleaching oil

### WOOD FEATURES

- 100% Edge grain
- 100% Clear
- 100% Heart wood
- Kiln-dried

Boxes from Imperial Cedar Products

Shingles laid at 7" exposure

Shingles laid at 14" exposure  
– requires an undercourse

Closeup of 100% clear grain

Shingles inside the box

Bureau label for #1 R&R

### COVERAGE

- Quantity available:  
**162 boxes**
- 18" length, 0.4" butt
- 100 SF / box at 14" exposure (requires undercourse)
- 50 SF / box at 7" exposure

### NOTES:

The bleaching oil will assist the shingles to naturally weather faster and ensure an even finish, particularly in deeper eaves and soffits or where there are shadier areas.

As Alaskan Yellow ages, it will initially turn a warm orange-red color and then soften into a gentle silvery gray. This process will take approximately 12 months with the bleaching oil in direct sunlight

R&R shingles are not rated for roofing, but are perfect for gable ends and sidewalls.
